## Fridays Daily Flashnews (Unedited report)

### Market moving aggressively higher, 2850 shall be next target for S&P by first week of February

Dear Members,

On Thursday the US market moved aggressively higher, but the rest of the global markets traded in a mixed direction.

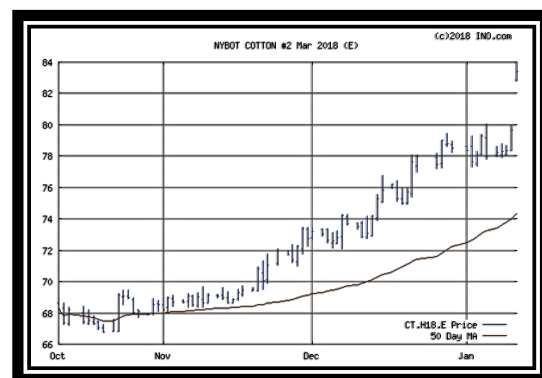

Euro moved higher after the European Central Bank said that they will revisit policy in yesterday's minutes. It is a clear indication of the end of economic stimulus in EURO, and the lower to negative interest rate to end soon, but that doesn't mean that the US Dollar would fall in the coming time.

Yesterday the US market moved aggressively higher, which is clearly indicating that a powerful time is pending in 2018, and the bull has more power to move ahead. I finished the book and it looks like that you may regain your money by trading on different sides of the market during different cycles. There are a total of eight cycles, and out of the eight, three are the most powerful bull cycles in 2018; three are sideways to mixed; and during these two cycle's the market will come down.

Yes, 3200 is very possible for S&P, but at this stage 2983 to 3018 is our target for S&P in 2018.

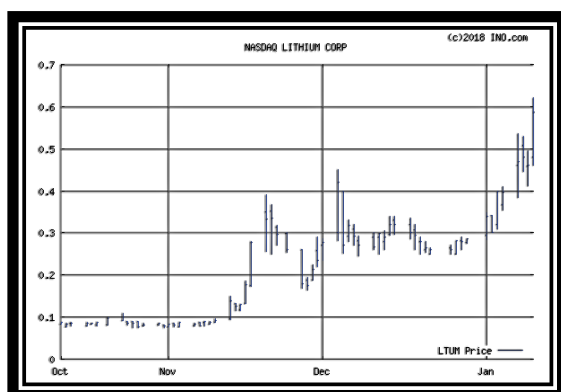

Many are saying, "Mahendra, you are changing your prediction for gold and the market." No, I am not changing my prediction. This cycle looks far better for gold and the market. The market came up during all the negative periods from August to October 2017, and the current time cycle is not as negative compared to what it was from August to October last year. I am just following the current cycle, and we have around 17 months left before another negative cycle starts, so our view on the market will turn very bearish once again in 2019.

Yesterday **Cotton** prices moved sharply higher, and it

finally it achieved one of the most important levels, and is ready to move aggressively higher. Stay long and add more cotton on weakness. Cotton remained one of the best performing commodities in the last three months.

One very small **Lithium Penny Stock LTUM** moved from \$0.07 to \$0.60. Our first target was achieved today, and the next target is \$1.25. This stock has

already provided nine times returns over the last two months. We have been recommending buying this stock as well as other lithium stocks every single day. There is still a long way to go, but this sector is one of our favorite sectors.

Grains and the rest of the softs traded as predicted on the negative side. Energy prices traded mixed but remained firm. Natural gas is coming closer to a selling level so get ready to sell today. Wait for oil to test \$65.57 to take short positions.

Dollar index will regain value again, so this is a great time to build short positions Euro around the higher side.

Precious metals traded higher. Platinum has been our favorite trade for the last few weeks, and it has been gaining value aggressively. Yesterday it also outperformed gold and silver. On Friday precious metals will trade positively and the rest of the base metals will be great sells either today or on Monday. Stay long in precious metals.

Crypto currencies traded negatively as predicted from the 7<sup>th</sup> of January. Three months ago we stated that Crypto will get hit by some negative news. At this stage South Korea is planning to ban trading in Crypto currencies. One thing I would like to remind you is that Crypto currencies are here to remain.

This is what we stated: Yesterday metals, energy, grains, softs, currencies and markets traded as predicted. Gold bounced back strongly. Oil is getting ready to achieve our final target of \$65.57 before it collapses. The markets are struggling as predicted for the short term. Three months ago we predicted that Crypto currencies would fall sharply after the 7<sup>th</sup> of January, and so far they are falling every single day. Another 30% correction can take place, but there will be a great buying opportunity in three crypto related stocks, DPW, TERM, and OTIV. I recommended these stocks this week and am recommending buying on weakness. Yesterday **DPW went up 37%, TEUM 12% and OTIV 3%**. The Crypto currency market will remain here once this bearish trend ends, and we may recommend adding more aggressive positions in all three of these stocks. Hold your investments in these three stocks if you have bought them already.

2018 Financial Predictions book is ready, we are just waiting for the Sun to change its house from Sagittarius to Capricorn. I want to focus on writing for the shorter-term rather than writing for the longer-term outlook every day, because shorter term trades can help you more than longer term ones. Yes, positional traders, which constitute more than 50% our members, would still like to have the medium and longer-term outlook, they don't care about short term; so we will focus more on shorter term in the Daily Flashnews and surely the weekly newsletter will provide you with the overall shorter, medium, and longer-term outlook.

I do regret the mistakes that I made in 2017, however I want to come out from this regression, so I have been meditating more. Except for the market and base metals, our predictions of the rest of the investment areas have done well, and I pray that I will be back with bang in 2018. I didn't want to write a book that won't help anyone. I needed to put my word out, and I did in my book. I put my best into the 2018 Financial Predictions. This book is short and to the point, unlike all my previous books.

Next week I will be in Santa Barbara, so I will release the book from SB.

On Thursday markets will trade mixed to negative. There won't be any aggressive moves on either side, but one can sell Japan and Russell 2000. Stay away from UVMY, and stay away from the European market for the next few days.

Thirty Year Bond has been providing good returns, so stay short, and add more shorts.

Grains and softs traded negatively, and they will continue trading in a negative direction today, but we may see some buying around the lower side. Stay long or buy more cotton, and add positions in coffee.

Dollar will rebound strongly late today. Any rise in most of the currencies should be taken as a selling opportunity.

This is what we stated yesterday: Thirty Year Bond came down sharply as predicted, time to trade below 150-00 have started and I was waiting for this period, it is adopting worst cycle so you must hold some short in Thirty Year and we are sure you will do amazingly well. Also we are sure you must have bought positions in Bond bear etfs we have been started recommending since last week Most of ETF'S like **TBT \$35.46 +1.00 (+2.90%)**, **TMV \$18.87 +0.72 (+3.97%)**, and **TTT \$26.15 +1.06 (+4.22%)**.

No excitement was witnessed in softs and grains, and we expected nothing to happen till the 14<sup>th</sup> of January.

Stocks traded mixed on Tuesday, and there was no negative sign, but UVXY traded higher. The negative astro cycle was not able to bring down the market, which means that the market will keep trading sideways during this negative time. We don't recommend shorts in the market, but one can hold small positions in UVXY as insurance.

Dollar gained value as predicted which put some pressure on metals. Precious metals time was negative from Monday, and we predicted this in the weekly newsletter. This negative time will end late today.

Uncertainty in Bitcoin and crypto currencies to continue. Crypto currencies lost value, so stay on the sidelines, and weakness will continue until the 14<sup>th</sup> of January. A weaker trend will start from the 7<sup>th</sup> of January and we expected this to happen, but I will recommend buying **OTIV and DPW**, so stay long and add some positions.

Stay long in lithium stocks. LTUM is holding very well, so stay long in most of the recommended lithium stocks.

This is what we stated Monday: *If the markets still hold value on Monday and Tuesday then S&P could easily test 2975 to 3025 in the next few months. If on Monday and Tuesday the markets hold value, then we should buy short term call options of March expiry, so let's see whether the negative astro combinations are able to hit the market or not.*

*So far in 2017 none of the negative astro combinations were able to pull down the markets trend, which clearly indicated that some external power is supporting the markets with money flow.*

*Here is a small note on crypto: Last month I stated that bitcoin will fall from the 7<sup>th</sup> of January but it already corrected so, **if bitcoin and crypto's don't fall between the 7<sup>th</sup> and 11<sup>th</sup> of January then a new bull era in crypto currencies will be born but looks like that they fall as predicted from 7<sup>th</sup> January.***

This is what we stated on 1 December: Frontline lithium stocks traded negative for mid-cap and small cap were in demand. **LTUM** remained in demand (we recommended buying at \$0.08) and it will keep moving higher in coming. Let's see whether it tests \$0.65 level during this week or not, we are expecting it test \$1.18 level.

This is what we stated on in October: S&P closed at 2581, it can move or test 2723. **IF THE MARKET DOESN'T FALL BY NEXT WEEK** and market may test 2723 level but I don't think S&P can test 3200 level which was predicted in 2009.

**Watch the important support & resistance levels updated on Monday, the 8<sup>nd</sup> of January 2018:**

- Gold started trading above \$1298 which confirms that gold may test \$1319, \$1343, and even \$1357. The major astro support point will be at \$1283 and \$1298. Silver and Platinum will follow gold.
- Oil will hold \$57.88. Oil will test \$61.38, if oil closes above \$61.38 for the three days then it may test \$65.59 then the bear market of 2018 will start in oil. Sell gas at \$3.14, and buying is only recommended at \$2.68. ERX traded above \$30.50 which is a positive sign for energy stocks and it may test \$39.55 to \$42.75 and in extreme case \$44.55.
- Thirty Year traded negatively as predicted, and now the major astro support will be at 147-00. One can start buying TTT, TBT, and TMV.
- S&P's first important resistance will be at \$2725. NASDAQ's astro resistance will be at 6587 and Russell at 1555. These indexes trading above these level for the five days will confirm new era of bull market which could take S&P toward 2875 to 2988 levels.
- Sell Pound aggressively at 1.3728 and Euro at 1.2098, but do it from the middle of this week.
- Buy dollar around 91.00 or below. One can start buying it from 91.55. **Last month USD bounced back strongly from 91.00 as predicted. It was a strong buying recommendation at 91.00 which proved prudent.**
- I am sure you must have closed all longs in cocoa and orange Juice at \$1800 and \$133. Cotton and coffee started acting positively. The next level will be at \$83.78 and \$128.55. The major astro support for coffee is at \$118, sugar \$13.71, and cotton at \$67.68. In the worst-case scenario coffee may test \$112 or even lower if it closes below \$118, but a longer term bullish astro cycle is about to begin. Close longs in cotton around \$78.78 and wait for it to close above this level for the three days.
- Soy oil has had a major astro support at \$32.11, and resistance at \$35.11. Selling is recommended at \$34.88.
- We have been stating that Corn will hold \$340, Wheat \$421, Soy \$952, and Meal \$305. On the higher side, the astro resistance level for wheat will be at \$525, Corn \$388 to \$433, and Soy at \$988 - \$1038 to \$1059.
- Orange Juice will have a major support at \$132 and it is a must-buy. Cocoa must be in your buying list at \$1800. Lumber will fail to move above \$480, and cocoa will come down from \$2259.

**Here are the trading strategies and ranges for Friday:**

**GOLD/SILVER/BASE METALS**

On Thursday precious metals held value as predicted and remained in the green. Our recommendation of buying gold from \$1238 has done well, and once it starts trading above \$1263, then it clears all hurdles, and our view became very bullish since it crossed \$1298. We are not recommending shorting gold, silver, and platinum because after a seven-year bear cycle, we are now predicting a bullish cycle for precious metals in 2018 due to a positive astro combination.

Stay long in gold, silver, and platinum. We are also recommending buying more positions in three of these precious metals. You can sell palladium against buying in gold and platinum. The rest of the base metals will remain in a mixed direction.

On Friday add more positions in JUNG, and NGUT. Trade in and out in base metals like Zinc, lead, and nickel.

Platinum is our favorite trade for the short period, so buy without fear.

This is what we started last week Monday: Gold will hold \$1298 and platinum \$921 in the worst-case scenario in coming days. On the higher side \$1341 to \$1357 is expected in the coming few weeks.

*If the astro cycles and golds trend match this week, then I am raising my target for gold to \$1509 or even higher. Gold will outperform silver, platinum, and the rest of the metals.*

**Friday's astro combination recommendation** – Buy more positions in precious metals today and stay away from base metals.

**Friday's trading range: (March 2018 contract):**

**GOLD: \$1329.90 to \$1316.00**

**SILVER: \$17.17 TO \$17.83**

**COPPER: \$325.90 TO \$321.05**

**PALLADIUM: \$1086.10 TO \$1069.00**

**PLATINUM: \$995.00 TO \$977.00 April 2018**

## INDEXES

On Thursday the market traded positively, and we expected positivity. We also stated that over the last two years every Scorpio Moon has supported the market, which proved true yesterday. Today Scorpio moon will favor the global market trend so stay long. We are not recommending any shorts in the market for the next month.

Our book will help you understand the cycle. Yesterday the astro cycles were negative, and have been negative from August to October, but the market acted positively. This was a clear sign of a bull era, and I was not able to recommend buying, but as I said that the cloud has disappeared over my head, and I can see clearly so let's make the best out of 2018 and 2019.

There will be a few aggressive short term negative cycle's in 2018, and I mentioned that in the book, so wait for book to release.

Don't short any market. Sell UVXY and buy lithium stocks as well as OTIV, TEUM, and DPW.

**As I stated that a new era of the bull has begun, and the market may move 35% higher in the final euphoric move in the next 17 months.** Indian market is one of our top pick for this year with **Nifty Index** first target 11255 and then 12388.

My favorite sector is Lithium, so put your hard-earned money in this sector.

**If the market closes in the green for five days in a row during this week, then I will recommend buying aggressive long positions in most of the Indexes, so buy call options as the market can rally another 5 to 10% very easily.**

*Our favorite stocks like **LTUM, NVSGF, MLNLF, RRSSF, ALTAF, PILBF** and many other stocks performed very well. Now it's time to come back and start trading on our recommendations. Yes I had a bad year, but that won't push me back because I follow the theory which has provided me with great predictions over the last 35 years.*

**Fridays astro combination recommendation** – Trade in and out in the most of markets but don't short markets.

Friday's trading ranges: **(March 2018 Contracts)**

HONG KONG (cash) – 31205 to 30985

NIFTY S&P (Spot) – 10698 TO 10628

NIKKEI – 24017 to 23771

CAC – 5539 TO 5477

DAX – 13298 TO 13170

DEX EURO STOXX – 3619 – 3578

FTSE – 7745 TO 7691

FTSE/JSE (Cash) – 53097 to 52715

S&P e-mini – 2775.00 TO 2765.00

NASDAQ 100 e-mini – 6552.00 TO 6696

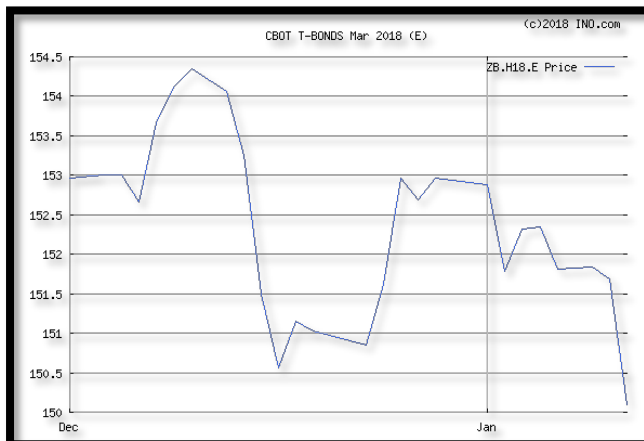

DOW e-mini – 25632 TO 25461

RUSSELL e-mini – 1592.00 TO 1578.00

## TREASURY BOND

On Thursday Thirty Year Bond traded mixed. We are recommending taking aggressive short positions in Bond in the coming time. I am sure most of you must be holding shorts in Thirty Year Bond as it is

adopting the worst cycle of many decades. Sell more positions on Thursday around the higher side with a target of 147-00.

Keep adding long positions in **TTT, TMV, and TBT**, and these are three are ETF's.

The overall trend will remain weaker as we expect inflation and rates rising in 2018. We already stated that Bond prices will hit 137 or lower in 2018.

**Fridays astro combination recommendation** – Selling is recommended on the higher side.

Friday's trading range **(March 2018 contract):**

TREASURY BOND – 150-23 TO 149-21

## SOFT COMMODITIES

Cotton prices moved sharply higher as predicted so stay long till \$87.87, and don't short cotton at any

price, until we recommend doing so. Start building small longs in coffee around \$122. We are not changing any of the predictions we made yesterday, but surely stay long in cotton and add more coffee on weakness: This week we stated that the first three days are not positive days for softs so stay on the sidelines. Thursday will be the right day to buy some positions in cotton and coffee, but remember that the Scorpio Moon will start before the market closes in New York, so Friday will be a Scorpio Moon day.

No leveraged buying is recommended for the next two days, but surely you must get ready to buy some aggressive positions in coffee and cotton from next week. Stay away from sugar, cocoa, lumber, and orange Juice.

This is what we stated yesterday: *Tuesday trade careful without leverage positions. First three days are not very positive for commodities so those who like to accumulate can move ahead and acquire coffee, short term traders can wait for another two days to buy. On Monday softs traded mix, in fact most of softs traded negative. Coffee closed below \$128 level which may push prices up to 122, one must get ready to add more or buy positions in around \$122 level.*

*Cotton traded mixed, closed below \$78.78, which is not a bullish sign, but we are not recommending any shorts. Hold small longs without fear and get ready to add more longs at \$75.35.*

*Avoid sugar, cocoa, orange Juice and lumber.*

*Overall Tuesday will remain mixed to negative day for softs.*

This what we stated in the two months: *As I said, three of the most important supports in coffee are at \$118, and \$112. We don't see coffee going below \$112 so keep this in mind. Cotton and sugar will remain in a positive trend but close all longs in sugar around \$15.78. 70% Cotton positions can be closed around \$72.72, and after that \$77.77 level. Stay on the sidelines in cocoa, and wait for it to hit \$1800 to take long positions once again. Stay short or add shorts in lumber and Orange Juice on Monday. Overall, Monday will remain a mixed day for soft commodities.*

**Friday astro combination recommendations** – Get ready to add coffee if it goes around \$122 level and stay long in cotton.

**Friday's trading range: (March 2018 Contract)**

**COFFEE: \$124.70 TO \$121.80**

**SUGAR: \$14.38 TO \$13.93**

**COTTON: 84.73 TO 81.75**

**LUMBER: 468 TO 461**

**COCOA: 1959 TO 1900**

**ORNAGE JUICE: 138.50 TO 135.35**

## GRAINS

On Thursday grains traded mixed as soy went lower, corn and wheat traded in small ranges. Soy meal and soy oil also traded lower. Soy will test \$952 level; we recommend watching this level closely so we are not recommending any aggressive buying but no shorts are recommended in soy as some positive time cycle is about to begin.

Trading in and out will remain the best strategy. Buying small positions in Soy won't hurt if you are longer term traders but no leverage bets because if Soy trades below \$952 then it may move lower. Corn and wheat will hold value on Thursday. Soy product will remain mix in the short term.

Soy and soy meal will trade positively or will hold value but still we are not recommending any aggressive buying. As predicted grains will start moving in a positive direction from the 14<sup>th</sup> of January 2018. Buy soy if it holds \$952 (March contracts), as closing below \$952 could push prices towards \$937.

Wheat \$407, corn \$341, and soy \$952, are great levels, so watch them.

**Fridays astro combination recommendations** – Trade in and out, and buy very small positions in wheat and soy around the lower side.

**Friday's trading range (March 2018 contracts):**

**CORN: \$350.0 TO \$347.00**

**WHEAT: \$435.00 TO \$428.00**

**SOY: \$957.00 TO \$945.00**

**SOY MEAL: \$315.00 TO \$310.50**

**SOY OIL: \$33.38 TO \$32.81**

## ENERGY

On Thursday Oil, heating oil and RB Gas traded a bit higher, but natural gas moved aggressively higher. Gas traded positive since Mercury changed houses during this week so don't take new shorts, just trade in and out. If Gas remains above \$3.15 for the five day then new era in gas can begin but at this stage just trade in and out, and watch \$3.15 level. Natural gas must hold \$2.95 level, this is the most important astro pivot point.

Get ready to sell Oil at \$65.57 level and at the same time one can sell heating oil and RB Gas. ERX moved higher yesterday, take small selling at \$42.55 and aggressive selling at \$44.55 level.

Friday oil and energy products will hold value so don't short positions.

As predicted oil could test \$65.57 level on the higher sides and on the lower side \$57.88 level in the coming month. Those who would like to wait to shall then they shall sell once start trading above \$65.00 level.

***This is what we stated last week Wednesday, 6 December: Natural gas came down on Tuesday and breached \$2.95 level so stay away. Don't buy gas at this stage until it remains below \$2.95, because then it could easily fall 10 to 15% more.***

This is what we stated two months back: *We are not recommending any shorts in oil. One can stay long or buy around the lower side if oil goes down after inventory. Heating oil and RB Gas will follow oil. One must get out from oil around \$61.38. Oil holding \$44.55 and moving above \$49.88 was a clear bullish sign and we predicted that. Pivot point will be at \$53.88 level.*

**Overall last three years we stated:** So far, short-term trading has provided great returns in the last 18 months after my selling recommendation at \$97.00 mid-2014. You must remember what we mentioned two weeks ago: In 2001, we recommended buying oil at \$16.78 with the target of \$100 and higher. In August 2008, we recommended selling at \$145 with the target of \$32.00. Once again in 2014 we recommended selling oil at \$100 with target of \$27.71. I couldn't ask more from nature.

**Friday astro combination recommendations for oil – Trade in and out in gas, oil, heating oil and RB Gas.**

**Friday's trading range (February 2018 contracts):**

**OIL: \$64.45 to \$63.01**

**NATURAL GAS: \$3.15 to \$2.99**

**HEATING OIL: \$2.1029 TO 2.0604**

**RB GAS: \$1.8545 TO \$1.8235**

## **CURRENCIES**

On Thursday USD came down sharply lower after ECB minutes released. ECB is open about ending stimulation and ending the negative interest rate policy, which pushed euro sharply higher against most of the currencies.

On Friday one can take sell positions in euro around the higher sides. Also buy Dollar against Pound and Franc. Japanese Yen will remain in the mix pattern. Australian and Canadian dollar will be good sell on Friday around the higher side and get ready to sell some more aggressive positions without fear during next week.

Euro will gain value against emerging market currencies in the Asian and European trading sessions but will start losing back value in USA trading sessions.

As predicted, dollar struggled to close above 92.55 level but will hold value 91.37 level so this is a great buying level in USD.

This what we stated yesterday: Dollar Index may trade in the range of 91.55 to 92.55 for the few days before it adopts a new cycle. Late today Scorpio Moon is starting so stay sidelined with any aggressive

trading positions. Pound won't be able to move above 1.3725, Euro 1.2098, Australian dollar 0.7988 and Canadian dollar 0.8089, with a three percent lower side target in the next three weeks.

1 September we stated: *Finally, great buying opportunity in USD have arrived since we recommended selling US dollar index at 102.75 to 103.78 levels. One must start buying USD around today's lower side levels as USD may make huge reversal from Thursday as predicted in this week newsletter.*

*Start building short or sell positions in Euro, Australian dollar, Canadian dollar and Franc. Also close all long positions in emerging market currencies. This is first time we are recommending closing all long positions in emerging market currencies since we started recommending buying in 2016.*

*Euro will top out around 1.2038 level. Dollar Index will be great buy at around 91.78 level.*

The maximum higher side for Australian dollar will be at \$0.8078, and Canadian at the 0.8154 level. The higher side target for pound is at the 1.3725 level. USD is a great buy around the 92.50 level; keep adding positions on every point it lowers. In the worst-case scenario, we may see the 90.78 level, but the chances of this happening are at 1%.

**Fridays astro combination recommendation** – Start buying USD on weakness and start selling most of frontline currencies specially Canadian dollar, Pound and Euro. Book profit in Rupee short.

**Friday's trading range: (March 2018 Contract)**

**DOLLAR INDEX – 91.88 to 91.36**

**AUSTRALIAN DOLLAR – 0.7925 to 0.7857**

**CANADIAN DOLLAR – 0.8031 to 0.7952**

**BRITISH POUND – 1.3621 to 1.3512**

**EURO – 1.2128 to 1.2029**

**JAPANESE YEN – 0.9078 to 0.8975**

**SWISS FRANC – 1.0340 to 1.0238**

**RUPEE – 63.90 to 63.57 (Spot)**

**RAND – 12.50 to 12.34 (Spot)**

London 23:16	Rio de Janeiro 19:16	New York 18:16	Los Angeles 15:16	Sydney 8:16
Tokyo 7:16	Shanghai 6:16	Bangkok 5:16	New Delhi 3:46	Dubai 2:16

Thanks & God Bless, Mahendra Sharma

12 January 2018, 05.00 AM, Mumbai

**Small part from past Flashnews:**

Remember this what we stated on 22 September 2016: **Gold will struggle to move above \$1348 and silver \$20.28; these are the selling levels in both these precious metals but remain as a day trader for this week.**

This is what we mentioned on 11 August 2016: **Higher side in gold can rise maximum \$15 from current level of \$1348 and lower side more than \$300 by end of February 2017. Sell more NUGT around \$178 and JNUG around \$320; these levels were the previous highs last month. Add more buying in DUST.**

**From stock market sections:**

**INDEXES:**

This is what we mentioned on Tuesday, the 25<sup>th</sup> of January 2016: *Tuesday will be a great time to acquire positions in the emerging markets as well as in the European markets. If what we are seeing happens then S&P should move towards 1936 or even higher and down side, it won't go below 1844 or it won't close below 1862 level.*

*On last week Thursday and Friday S&P closed higher and finally settled at 1901 levels. Those who have been following our works for decades must know how important our astro support and resistance levels are. Last year also the lower side astro resistance was 1827, and the higher side 2088. Both these levels played a very important role for the market. So far the support level of 1821 played an important role on Wednesday and we are hopeful that S&P won't go below this level in the year 2016 and that the astro support and resistance levels continue playing an important role.*

This is what we mentioned the 18<sup>th</sup> of Jan 2016: *On Friday investors experienced a nightmare. It was day that no investor likes to see because on this kind of day the trading accounts of longer term investors are always deep in the red. In 2000 when the tech stocks crashed we never recommended any buying to investors because the astro cycle was negative for two years and it was clear that the market may remain down for the next two years. In 2008 crash which we predicted, we were also aware that the market would rebound from the 26<sup>th</sup> of February 2009. We recommended that the market would bottom out on the 6<sup>th</sup> of March 2009 and that investors should start accumulating stocks keeping in mind that they have to hold them for five years and that they would make a fortune. We strongly recommended, not to focus on the daily volatility and keep busy accumulating quality stocks. This proved to be very accurate advice.*

This is what we mentioned Monday 8 August: Billions of dollars follow our predictions closely so some support always comes around our predicted levels. 12<sup>th</sup> February 2016, S&P moved more than 360 points rally which no one expected.

This is what we mentioned on the 29<sup>th</sup> of February: At this stage we are expecting that the Indian market will perform, so this is a great time for international investors to put money in the US market as Rupee is at a historic low and the market has already corrected 26% from higher levels. Brazil and China have also performed negatively and it looks like a big turnaround is on the way from this week. It is time to build some aggressive positions in **BRZU at \$9.30, YINN \$10.65, and INDL \$8.40**. We recommended buying these ETF's before at higher levels and we are still recommending holding on to old positions and adding more positions at current levels. Watch emerging market currencies because any turn around in **Brazilian Real can push BRZU toward \$39.00 from 9.30**. S&P closed above 1938 and if it closes above 1938 for more than two days then expect it to move towards 1988 during this week or next week.

Two weeks ago we predicted that 1864 is a great buying level with the first target of 1938 and 1988. The first target got achieved very quickly and the second target will get achieved soon and after that our most important astro resistance level will be 2088, which has played a crucial role in keeping the bull away to move above 2088 for the last 16 months.

**Thirty Year Bond**

This is what we mentioned 10 September: *Tuesday Thirty Year Bond gained value, and same indicating on Wednesday. Fed may leave rate decision sideline which can push bond toward 168/169. Rate hike may bring prices 162 level. Overall trend is negative so get ready to sell on any rise if FED refuse to hike.*

*In the last ten weeks' bond prices came down from 176 to 165 as predicted and our longer-term view is very negative so keep building sell positions on any rise.*

*By the end of this year we may see 162-25 and 157. Stay long in TTT, TBT and TMV.*

**Energy:**

This is what we stated 17 April, Monday: *ERX lost more 5% value and if ERX trade below \$30.00 then there are chances that it will test \$25.50 level which means oil prices will trade negative in coming time.*

*Once again oil will try to test \$54.78 but if this week it fails then we may see \$47.00 level once again. Major astro support point is \$49.88 level. RB Gas and HEATING OIL will follow oil.*

*On Monday oil prices will trade mix to negative but in USA trading one can take small buying, if oil fail to rise on Tuesday then expect major corrections in once again in coming time.*

*On Monday Natural gas will trade mix and prices will move both sides, trading in and out will remain best strategy in gas on Monday. Sell or short around \$3.38 level.*

This is what we mentioned on 8 January - *Natural gas went down sharply as predicted and tested \$3.16 from \$3.83, and the volatile trend will continue in GAS so trade carefully. Oil will only be able to move higher if it closes above \$54.78 for three days which we don't see happening.*

*Energy stocks traded mixed. ERX is unable to move above \$43.00 and oil above \$54.78 which is not a good sign for the energy market.*

We are not changing any of the predictions we mentioned on the 3<sup>rd</sup> of June: Same kind of positive, RB GAS and heating oil also moved higher. Natural gas traded mix. ERX have been hanging around \$29.00 level and it must close above \$33.00 level to give bullish signal in energy stocks which we don't see at this stage moment.

Oil has been failing to close above \$48.88 level but same time it is not closing below 48.88 level as well. If oil closes above \$48.88 for three days, then the next price level of \$52.55 may get achieved. At this stage some selling is recommended around \$48.88 level and on the down side the important level to buy is at \$44.55. Oil prices have gained almost 70% from \$27.71 which we called the perfect bottom for oil.

This is what we mentioned on the 2<sup>nd</sup> of February: Many are predicting oil remaining in the teen's, but we do not see oil going below \$27.71, so I hope those who are targeting \$21 are doing their research well. Higher side it will struggle to move above \$35.18 levels, and if it does than \$44.55 is next target with \$48.88 selling level.

Natural gas lost a lot of value from our recommended selling price of \$2.44. today it closed around \$2.03. One can start acquiring very small positions in natural gas around \$1.72 and below.

*This is what we mentioned in our book "2016 financial Predictions" in oil sections:*

**IMPORTANT NOTE:** *As most of you are aware our view for energy has been very negative since June 2014. The overall trend in energy prices will remain negative so we do not recommend adopting long term positions. This means that do not take any trades earlier in the year and continue holding them for the rest of the year, because the higher side in oil will remain limited. There will be better opportunities to make money by trading in and out. Heating oil and RB gas will follow oils trend, so during this year we may see oil moving towards \$48.50 or \$52.95, and on the down side it may hold \$34.55. If it closes below \$35.55 for three days then there are chances that oil prices could fall towards \$29.65. Traders should take advantage of buying short term call options before any of the above-mentioned cycles start, and also book profit quickly before the positive cycles end.*

*Energy stocks will trade mixed without any major movement, so longer term investors should not be putting any money in energy stocks. Any sharp rise should be taken as a profit booking opportunity if you are holding any energy stocks.*

*Natural Gas' trend will remain positive during 2016, so one can stay long in Natural Gas in the year 2016. However, it is very important to remember to keep booking profit before any of the above mentioned negative cycles start. Overall, Natural Gas will outperform oil in the year 2016.*

*For short term strategies and price targets please follow our weekly and daily newsletters.*

**Ninth Cycle:**

From the **26th of November to 31st of December 2016** - During this cycle we see positive momentum coming back in the energy market and oil prices will form a bottom, and oil stocks will also act positively. Even though this is a positive cycle, the higher side will remain limited. Natural gas and RB gas will move sharply higher during this period.

**Energy trading ranges for 2016:**

**Crude Oil: \$52.95 to \$29.78** (As predicted last year that oil may hold \$30.00 level and if its trade below for five days then possibility that could test 2002 low of \$27.78 level)

**Natural Gas: \$2.88 to \$1.82 (higher side \$3.57 if it cross \$2.88)**

Look at accuracy level about oil what we predicted in the book.

This is what we stated Monday, 31 Oct 2016: *Friday oil, heating oil and RB Gas traded negative as predicted. Energy stocks also went down but gas traded mixed. On Monday, oil will trade negative; stay sidelined or those who are holding shorts can continue holding and cover some around \$47.50. If oil starts trading below this, then expect \$46.75 to \$44.88 level, cover all shorts at \$44.55 level. Heating oil and RB Gas will trade negative or will follow oil. On the higher side, oil will struggle to remain above \$49.88 level which is the most important astro resistance level.*

*Natural gas will trade on both sides without any clear directions so avoid trading but on the lower side one can buy GAS for Tuesday. Don't touch energy stocks as they will keep struggling.*

This is what we mentioned on for Friday 2 Sep 2016: *On Thursday oil, heating oil and RB Gas prices went down sharply lower and weakness will continue Friday. One can cover 50 to 70% shorts around \$42.61 level in oil and 100% around \$41.78, so one can cover positions in heating oil and RB Gas on Friday.*

This is what we mentioned Monday, the 21<sup>st</sup> of December 2015: *Last week energy traders remained very nervous as they felt like abandoned by the bigger financial institutions and other large energy investors, but the truth is that every energy trader or investor is badly stuck energy trades.*

*In 2008 we predicted a crash in oil from \$145 and in 2009 we predicted that it had bottomed out at \$33.00 level. That prediction provided great returns those who invested in oil and energy stocks. Now once again after the prediction of oil falling in 2014, since the last two weeks we have been predicting that oil would form a bottom around \$34.55 level so watch this prediction closely. I am not saying that oil won't fall below \$34.55 level but surely those who will buy around this level may be rewarded handsomely.*

*Maximum fearful days: According to the current astro cycle we see another 12 volatile or fearful trading days are pending but the down side is limited.*

This is what we mentioned on the 27<sup>th</sup> of August 2015: *If oil trades below \$47.00 for two days then there are chances it could retest our magic support figure of \$44.55. If it starts trading below \$44.55 then next level \$38.50 so avoid buying positions.*

*We are not recommending any buying in heating oil and RB gas, also one should avoid buying any energy stocks.*

This is what we mentioned on the 27<sup>th</sup> of April 2015: *Adopt trading in and out strategy in energy, **but don't take any shorts in oil, heating oil or RB Gas. Sell some energy stocks.** Energy stocks will trade mixed without any major move so one can get ready to sell energy stocks. Higher side it is possibility that oil may see \$63.80 level, if its hold \$57.00 level. Keep adding positions in Natural gas around \$2.55.*

This is what we mentioned on the 5<sup>th</sup> of March 2015: *Oil shouldn't break \$47.00 level this time, if it does then surely scary time is coming ahead for energy investors. On Down side oil will hold \$47 and on the higher it will have a difficult time crossing above \$55.78 so watch these levels closely.*

Watch our higher side target \$55.78 to short and \$44.55 to aggressive buy. Stay away from energy stocks. Small support for oil is \$47.00. ERX won't be able to move above \$70.00 level, so selling is recommended in energy stocks when ERX reaches to \$70.00.

This is what we mentioned on the 3<sup>rd</sup> of January 2015: **On our predicted lower side target of \$44.55 is coming closer so one can cover 100% short positions and may be buy very small trade but I won't be buying as I would like dust to settle. RB Gas, heating oil and natural gas lost value as well on Monday. Don't buy RB Gas and heating oil but surely natural gas can be bought around \$2.71.**

This is what we mentioned on the 23<sup>rd</sup> of December 2014: **Oil can only get lower if it close below \$54.40 for three days, if it does then it will hit \$45.20 but chances of happening this is very less.**

This is what we mentioned on the 11<sup>th</sup> of December 2014: **Wednesday our fear proven very true, we strongly recommend to stay away from oil. When oil broke \$92.88 we recommended sell oil and get out from all energy product, when it broke \$88.88 we predicted it is reaching toward \$64.20. Two weeks back we mentioned that if oil falls below \$64.20 then chances are that it may move toward \$57.80 level. Most important level will be \$54.40.**

This is what we mentioned on the 5<sup>th</sup> of December 2014: **Oil and other energy products lost more value on Friday as predicted. We are not recommending any buying in energy stocks, oil, RB gas and heating oil. Natural gain gained value from the lower levels on Friday as predicted.**

**On Monday the higher side will remain limited, and if oil closes below or trades below \$64.00 for more than seven hours then expect \$57.90 levels in the short term. Selling is recommended in energy and energy stocks on Monday. It looks like oil is getting ready to break \$60.00 so stay short or add selling on any fall.**

**Currencies:**

This is what we stated 4 January 2017: *We don't see dollar index going above 103.78 level so watch closely and closing below 102.55 will push dollar toward 101.55 level. Most of currencies gained nice value on Wednesday, emerging market currencies had best day.*

*On Thursday, most of currencies will trade both sides, buying is recommended on lower sides in most of currencies so don't miss opportunity.*

**Buy Pound, Yen, Australian dollar and Canadian dollar. Also buy Franc and Euro without fear.**

*Astro cycle changed late today on 3<sup>rd</sup> January so safe buying in all major currencies against USD.*

**Dollar closing below 102.75 will confirm that it would test the 101.55 level this week.**

We are not changing any predictions in currencies of what we mentioned on Monday, 31 October 2016: *Once again tested 99.00 level but then sharply came down from the middle of the trading sessions. We are still recommending to keep building positions in USD around 99.00 level. On Monday, we still recommend buying Euro and other currencies around the lower side, or selling USD around the higher side level. On the down side USD may hold 96.71 level so watch this level closely. Euro can move up to 1.1111 level in this week, so book profit if it goes there.*

*On late Monday, the Scorpio Moon will bring both sides volatility. On Wednesday, the FED will announce decisions and due to the Scorpio Moon traders will get confused. Trade light or just trade in and out in currencies but medium term traders can hold selling positions in USD.*

*Stay short in Yen but one can cover Japanese Yen as it may move towards 0.9525 to 0.9250 level at this stage.*

*This is what we mentioned Monday on 29 August 2016: We see Euro holding 1.1055 level and Pound 1.2925 level. We don't see it falling below 0.9410 level and on the higher side it will have a difficult time to move above 1.0198 level. For USD index 97.00 to 97.50 level will play the role of a Wall for dollar which dollar may not be able to breach at this stage, or maybe even for the next six weeks, and on the down side USD may test 92.50 level.*

*This is what we mentioned last week on Monday, 25 July 2016: This is what we mentioned on Wednesday, the 13<sup>th</sup> of July: Any rise shall be taken as selling opportunity in Yen, in the next two months we can 900 pips in Yen or it will easily come down to 0.9200 level very soon. We don't see Yen moving above 0.9878 level and in the worst case scenario 1.0000 will be maximum side.*

*Friday USD tested 97.50 level and this is an important level. Dollar may keep testing this level during this week. **We don't see Euro going below 1.0923 and Pound 1.2988 level.** Pound should be in you aggressive buying list until it holds this level.*

*On Monday, the 11<sup>th</sup> of April 2016 we stated: Last week USD traded negative, and lost value against most of currencies. There are still chances that USD may test 92.50 level so watch USD trend closely, and start taking positions at 92.50 level.*

*Emerging market currencies have done very well and it's time to close positions if you are short or medium term traders. Rupee won't fall much so don't short Rupee but surely Rand, Real, Peso and Rubble will lose some value from middle of Monday.*

*Australian won't hold above \$0.7725, Canadian dollar 0.7900, Euro 1.1475, Franc 1.0555, and Yen 0.9288 level.*

*This is what we mentioned last Thursday: Pound is ready for 1.4123 mark. Sell Pound and add more Swiss Franc sell.*

*We are not recommending any new short in Euro, surely one can acquire some positions in Euro for the short period of time.*

*Emerging market currencies are getting ready to for bottoms expect few won't be trust like Rand and Rubble. Wednesday we see many currencies gaining some value but stay away from Pound, Canadian and Franc as they can keep making new lows so hold positions with 3% more corrections.*

*This is what we mentioned on the 22<sup>nd</sup> of December: Euro will struggle to move above 1.1075 and may hold value 1.0725 so watch these both levels closely.*

*This is what we mentioned on the 23<sup>rd</sup> of April 2015: The Medium and longer term trend is still very positive for USD but for the short term a mix to bit weaker trend indicated. USD Index have achieved our target of 100 and now down side 95.00 or at worst case 90.00 level will be great buying.*

***Dollar is our longer term buying trade so we won't recommend shorting dollar, we recommend buying USD on any weakness. Euro higher side 300 pips and lower side more than 3000 pips. We don't see USD index going below 95.00 levels.***

*Remember this what we mentioned on the 5<sup>th</sup> of March 2015: Currency war has nothing to do with USD Friday USD gained value as predicted. Medium and longer term outlook is very positive. As stated dollar will have some difficulty crossing above 95.50 level for the short term but if dollar will break 95.50 then it may move towards 102.70 later this year. On the other hand euro will move towards 1.0730 to 1.0388. At this stage one should start covering all shorts in currency.*

*Sell Euro around 1.1730 to 1.1788 and Franc 1.0988.*

This is what we mentioned on the 15<sup>th</sup> of Jan 2015, Monday: *Most fund managers and market advisors are still analyzing the after effects of a rocking Swiss Franc on Swiss National Bank. I just finished one interview from Switzerland and they are too excited about Swiss Franc's move. Our view was very simple, we recommended that it will not be able to hold above 1.2270 level so if Franc moves to 1.2270 then it will be time to sell as it will going to go back to par levels.*

This is we mentioned on the 2<sup>nd</sup> of October: *On Thursday USD will trade mixed so we strongly recommend booking 100% profit in all short positions in euro, Pound, Franc, Yen and Australian dollar. Euro has moved down more than 1000 pips, Franc moved 750 pips, and Yen 4000 Pips. We will wait for few days before we put out a new strategy so wait for our weekly newsletter.*

Remember, this is what we mentioned in the month of July: *At this stage USD is trading in a positive direction without any break since the last three weeks. Finally, it is reaching a most crucial level because once it breaks 81.78 then the nonstop upside journey will start in USD. Also euro falling below 1.3355 level will bring huge corrections. I am waiting for USD to close above 81.78 because then USD will move like wild fire toward 87.88.*

**This is what we mentioned in the month of May (2014): Keep adding USD on any weaknesses on Tuesday or around 79.50. Sell Euro around 1.3988, and Swiss Franc around 1.1470. Emerging market currencies will trade a bit weaker or sideways from Tuesday. We strongly recommend taking some buying positions in USD around 79.50.**

*In this year book "2015 financial predictions" we predicted "final bear cycle in market from 27 July to 15 August 2015", yes Sun can bring some uncertainty but take this uncertainty as buying opportunity in same time in 2015 in the month of August.*

Watch 2088 level for S&P, as it is most tough astro resistance of 2015. In April when markets were falling, we predicted S&P won't go below 1825, and by the 15th of June, S&P would achieve 1932 to 1955 and 1988.

In our 2015 book we mentioned that commodities will have worst year of 2015, and so far precious metals, base metals, grains and softs have been struggling and they will keep moving down in the second half. Dollar will perform amazingly well in 2015 so hold positions and money in USD.
