Wednesday Daily Flash news (Unedited report)

Volatility to dominate until 14 January 2020 but I don't see war, it will be proxy fake war with any major casualties so be aware...

Iran targets US troops with missile strikes

At least two bases in Iraq have been attacked, but it is unclear if there have been casualties.

Dear Members,

Market traded mix on Tuesday, on Wednesday in after hours market started trading sharply negative on news of Iran launched Rocket which hits Iraq where US troops are based. This news pushed USA Indexes sharply lower and gold sharply higher.

Before I write further about Wednesday, I would like to clarify that in our book "**2020 Financial prophecies**" in first current cycle we mentioned gold moving higher and outperforming rest of metals. Two important levels are there for gold to achieve, first one \$1655 is most important astro resistance level for gold before it test \$1755.

We also mentioned in the book that middle east tension (USA/IRAN) will be on pick till **14 January 2020** (remain cautious until 14th Jan in metals and markets because anything can happen) and after that things will settle down so keep this in mind before you take any trade for the medium term.

We also recommended stay sideline in equity market **until 14 January 2020** if you are short term traders because there could be volatility with uncertain trend in USA

market but watch most important astro support level of 3189 as this is buying level with tight stop-loss.

Lets talk about Wednesday:

Metals already started trading higher on news of rocket hitting where USA troops are. It is clear that gold may see first \$1655 to \$1755. And also watch higher side level as mentioned in the book. Wednesday's astro combinations recommend to close long on higher side level mentioned in flashnews (\$1611) but don't short gold due to overall astro trend for medium term is bullish for gold so expect downside very limited. Some profit booking may come again higher side on Wednesday, **but in our weekly newsletter we mentioned buying some more positions on Friday as next week gold could move sharply higher.** Short term crucial astro resistance is \$1611, \$18.95 and platinum \$988 so close long around these levels in precious metals if you are short term trader.

As mentioned in weekly letter that markets will trade uncertain on Wednesday, so stay sideline without buying any new positions. Watch 3189 level closely as it is important astro support and lower side level for this week.

Oil may test \$65.88 level on higher sides, book profit or close long around this level but don't short until situations get clear.

Coffee held \$119 level, so this will be buying level. Close long in sugar and cotton on Wednesday. Trade in and out in grains on Wednesday.

Dollar made gain on Tuesday against frontline currencies like Euro, Pound and Franc as expected, but emerging market currencies may turn in opposite directions so buy positions in Brazilian Real and Rupee on Wednesday. Avoid buying in Franc, Euro and Pound.

Must read metal and Indexes sections in book very carefully, it is eye opening as well as hard to believe that how we predicted current happening in advance in middle-east, metals, oil and markets. Those who are first time buyer of our book, couldn't believe that someone can write book like this and predict every month trend in advance.

Must follow every cycle mentioned in the book very carefully, you will be amazed what we mentioned in book in the first cycle for metals, oil and markets.

Our special launching offer of book price \$395 will end today mid night so take advantage of this, from tomorrow book price will increase to \$595 from \$395.

Important note: Daily Flashnews is only for day trading purpose, for medium to longer term view you must have read weekly newsletter and yearly book.

Daily ranges are only valid for day trading purpose.

Watch the important support & resistance levels for this week (6th – 10th of January 2020):

- Gold trading in the range of 1611/1551, Platinum \$1017/968, and silver \$18.97/18.17. Next higher side target could be \$1655 in gold.
- New Palladium's astro resistance will be at \$2022 and lower side major support at \$1645; Copper will struggle to close above \$288, and lower side \$273 level is support level.
- S&P's held 3189 level, so now first astro support is at 3248 and 3289.
- Oil closing above \$61.28, will push toward \$65.88 and astro support is at \$61.18.
- Gas's new level will be from \$2.03 to \$2.19; close above these levels will give birth to new directions trend.
- Bond achieved 161-00, on lower sides 154-00 is possible.
- Dollar Index will be struggled 97.18 level so keep this in mind and on lower side 96.18 level will be key support. Pound higher side 1.3278 and lower side 1.2789 will be key level. Aggressive selling is recommended in Euro around 1.1288 level.
- Stay long emerging market currencies, sell Dollar once again against Rand 15.35, Peso at around 19.69, Rupee at 72.37, and Real at \$4.26. Real, peso and Rupee has power to move further higher.

- Orange Juice held a strong astro support level at \$95.65, next important astro resistance will be \$137.35, Sugar's \$11.37 support and \$13.68 is astro resistance level. Cotton has support at \$63.08 and \$69.75 strong resistance level, cocoa support level \$2125 and selling \$2698. Coffee support at \$119.00 and \$137.00 astro resistance.
- Wheat \$501, corn at \$368 and Soy \$863 will be great buy. Higher side book profit in wheat at \$575, corn \$423 and soy at \$975.

Here are the trading strategies and ranges for Wednesday:

GOLD/SILVER/BASE METALS

On Tuesday metals opened negative but recovered during the day. It was mix day but still metals acted well. On Wednesday metals opened sharply higher at the time I am writing this letter due to Iran fires missiles on base of USA residence in IRAQ.

It looks like that our first target \$1655 will achieve very quickly, next week is positive so now we won't recommend selling any metals from Friday onward. Also medium term astro timing is positive so keep this in mind. Wednesday one can book profit in precious metals on higher sides level as mentioned below in daily ranges but recommended not to short positions.

Short term negativity is eaten by Mars, which means that metals can hold value and move higher, gold has been trading above \$1548 level which is also positive news. Silver and platinum may follow but they will be legging behind to match GOLD. Now gold may not fall below \$1551 level in coming time so treat this as buying level and watch \$1611 and \$1655 level on higher sides. Silver may struggle to close above \$18.98 and platinum \$988. If Gold moves above \$1611 level then silver can retest \$19.88 level. Follow our book closely.

MINING stocks will gain value.

Base metals trend looks negative so sell base metals, if I am not mistaking then palladium made top on Tuesday at \$2022 and may close below \$1959 in the next few days which is most important level. Sell copper on Wednesday along with Zinc, Nickel and aluminum.

Wednesday astro combination recommendation – On Wednesday precious metals may move higher but higher side profit booking will come, sell base metals. Coming ten days are positive for precious metals so watch carefully.

Wednesday's trading range: (March 2020 future contract):

GOLD: \$1617.00 to \$1591.20 (Spot ranges \$1617.00 to \$1590.00)

COPPER: \$280.90 TO \$275.00

PALLADIUM: \$2018.00 TO \$1969.00

PLATINUM: \$988.00 TO \$963.00 April 20

INDEXES

On Tuesday market traded stable, but close bit negative. few hours back IRAN fires missiles new that push market sharply lower in electronic session.

Now 3189 will be crucial astro support level, and soon buying time is coming but I will love to wait till 14 January 2020 as mentioned in this yearbook as until this date some uncertainty may hit market as predicted.

I see S&P going toward 3800, yes expect some volatility before we take aggressive long so have patience for the next two weeks.

On Wednesday surely market will get hit due to tension in middle-east, if you have deep pocket then buy small positions. Take small long in UVXY.

Add more positions in YINN and INDL.

These recommended last to investors even for the short those all these stocks are in our buying list since 2011 and we constantly recommended adding on weakness: TSLA, NFLX, AMZN, Google, MSFT, Apple, REGN, BIIB and CELG are great bets.

Wednesday's astro combination recommendation: Buy some positions in market on weakness.

ENERGY

Oil, heating oil and RB Gas traded negative on Tuesday but missiles fire news pushed oil, heating oil and RB Gas sharply higher in the last few hours in early Asian trading sessions.

On Wednesday oil will open higher and this is not predictions it is due to news, but I would like to see whether it closes above

\$65.88 level or not as it is important astro resistance level. Sell some positions around this level. Oil closing above \$65.88 for three days will open the door for oil to test \$74.63 level so at this stage wait, surely close long at \$65.88 level.

Gas will act mix, so trade in and out. Gas positive time will start from 14 Jan, lower side \$2.03 is great level to buy. Avoid Monday.

This is what we stated over the last four years: So far, short-term trading has provided great returns in the last 18 months after my selling recommendation at \$97.00 mid-2014. You must remember at we mentioned two weeks ago. In

2001, we recommended buying oil at \$16.78 with a target of \$100 and higher. In August 2008, we recommended selling at \$145 with the target of \$32.00. Once again in 2014 we recommended selling oil at \$100 with target of \$27.71. I couldn't ask more from nature.

Wednesday astro combination recommendations for oil – On Wednesday close long at \$65.88 level and watch next move.

Wednesday's trading range (February 2020 contracts):

OIL: \$65.78 to \$64.02

NATURAL GAS: \$2.19 to \$2.11

RB GAS: \$1.7991 TO \$1.7595

HEATING OIL: \$2.1095 TO 2.0447

CURRENCIES

On Tuesday frontline currencies like Australian dollar, Pound, Euro and Franc lost value. Emerging market currencies remained in the positive directions. Yen traded mix.

On Wednesday emerging market currencies, Franc and Yen may gain some value.

Euro, Pound, New Zealand dollar and Australian dollar will lose more value so stay short in these currencies. Dollar Index will hold value, but my favorite is buying emerging market currencies.

Keep these levels in mind to sell positions as mentioned on Thursday last week: Euro will struggle to move above 1.1287 level, Australian dollar 0.7065, Swiss Franc 1.0701, Canadian dollar 0.8011, and Pound 1.3199 so these are selling levels. These are most crucial level and if these currencies close above this level then will release new resistance. At this stage these are levels to watch to sell positions.

This is what we stated two months back: Dollar won't go above 4.26 against Real, 20.43 against Peso, 71.98 against Rupee and 15.65 against Rand.

Eighteen months back we recommended - Great selling in euro around 1.2488 to 1.2555, Pound 1.3988 to 1.4375, Canadian 0.8188, and Australian dollar 0.8098.

Wednesday astro combination recommendation – Trade in and out in most of currencies, buy more Rupee and Real.

TREASURY BOND

On Tuesday bond prices lost value as expected. More selling is recommended on Wednesday though market can have some volatility so expect prices to move rapidly.

We don't see Bond remaining above 159-00 level.

Trading range now from here will be 159-00 to 151-00.

Last January, we stated: *We started recommending selling in Bond at 172-00 with the most important support level at 137-00, which was achieved.*

Wednesdays astro combination recommendation – Higher side selling is recommended.

Wednesday's trading range (March 2020 contract):

TREASURY BOND – 159-12 TO 158-02

SOFT COMMODITIES/

As Tuesday coffee moved lower and recovered from the lower sides levels. Sell cotton, sugar and lumber. Trade in and out in cocoa and coffee on Wednesday.

Our higher side target of \$13.73. One can close long in sugar and cotton.

Don't buy any softs on Wednesday, Buy some positions in coffee around \$119, sugar \$12.97 and cotton \$63.00. Next few weeks are uncertain so remain sideways or short-term trader.

Three months ago, we stated: A lifetime buying opportunity is coming in coffee at \$93.75, cotton at \$57.75, sugar at \$10.88.

Wednesday astro combination recommendations – Stay sideline in soft commodities, close long in sugar and cotton.

Wednesday's trading range: (March 2020 Contract)

From stock market sections:

INDEXES:

Remember this Feb 2018 statement – Now I will be watching 2550 level; if S&P closes below this level for the three days, then disaster will take place for stocks and S&P may test 2451. I may recommend closing long in stocks but lets see whether S&P will not close below 2550 or it bounce back from this level. I am not worried after April but let's focus on April at this stage. If everything goes smooth, then we may see S&P testing 2900 every soon in 2018.

This is what we mentioned on Tuesday, the 25th of January 2016: Tuesday will be a great time to acquire positions in the emerging markets as well as in the

European markets. If what we are seeing happens then S&P should move towards 1936 or even higher and down side, it won't go below 1844 or it won't close below 1862 level.

On last week Thursday and Friday S&P closed higher and finally settled at 1901 levels. Those who have been following our works for decades must know how important our astro support and resistance levels are. Last year also the lower side astro resistance was 1827, and the higher side 2088. Both these levels played a very important role for the market. So far the support level of 1821 played an important role on Wednesday and we are hopeful that S&P won't go below this level in the year 2016 and that the astro support and resistance levels continue playing an important role.

This is what we mentioned the 18th of Jan 2016: On Friday investors experienced a nightmare. It was day that no investor likes to see because on this kind of day the trading accounts of longer term investors are always deep in the red. In 2000 when the tech stocks crashed we never recommended any buying to investors because the astro cycle was negative for two years and it was clear that the market may remain down for the next two years. In 2008 crash which we predicted, we were also aware that the market would rebound from the 26th of February 2009. We recommended that the market would bottom out on the 6th of March 2009 and that investors should start accumulating stocks keeping in mind that they have to hold them for five years and that they would make a fortune. We strongly recommended, not to focus on the daily volatility and keep busy accumulating quality stocks. This proved to be very accurate advice.

This is what we mentioned on Monday, the 8th of August: Billions of dollars follow our predictions closely so some support always comes around our predicted levels. 12th February 2016, S&P moved more than 360 points rally which no one expected.

*This is what we mentioned on the 29th of February: At this stage we are expecting that the Indian market will perform, so this is a great time for international investors to put money in the US market as Rupee is at a historic low and the market has already corrected 26% from higher levels. Brazil and China have also performed negatively and it looks like a big turnaround is on the way from this week. It is time to build some aggressive positions in **BRZU at \$9.30, YINN \$10.65, and INDL \$8.40**. We recommended buying these ETF's before at higher levels and we are still recommending holding on to old*

positions and adding more positions at current levels. Watch emerging market currencies because any turn around in **Brazilian Real can push BRZU toward \$39.00 from 9.30**. S&P closed above 1938 and if it closes above 1938 for more than two days then expect it to move towards 1988 during this week or next week.

Two weeks ago we predicted that 1864 is a great buying level with the first target of 1938 and 1988. The first target got achieved very quickly and the second target will get achieved soon and after that our most important astro resistance level will be 2088, which has played a crucial role in keeping the bull away to move above 2088 for the last 16 months.

Thirty Year Bond

This is what we mentioned on the 10th of September: *Tuesday Thirty Year Bond gained value, and same indicating on Wednesday. Fed may leave rate decision sideline which can push bond toward 168/169. Rate hike may bring prices 162 level. Overall trend is negative so get ready to sell on any rise if FED refuse to hike.*

In the last ten weeks' bond prices came down from 176 to 165 as predicted and our longer-term view is very negative so keep building sell positions on any rise.

By the end of this year we may see 162-25 and 157. Stay long in TTT, TBT and TMV.

Energy:

This is what we stated on Monday, the 17th of April: *ERX lost more 5% value and if ERX trade below \$30.00 then there are chances that it will test \$25.50 level which means oil prices will trade negative in coming time.*

Once again oil will try to test \$54.78 but if this week it fails then we may see \$47.00 level once again. Major astro support point is \$49.88 level. RB Gas and HEATING OIL will follow oil.

On Monday oil prices will trade mix to negative but in USA trading one can take small buying, if oil fail to rise on Tuesday then expect major corrections in once again in coming time.

On Monday Natural gas will trade mix and prices will move both sides, trading in and out will remain best strategy in gas on Monday. Sell or short around \$3.38 level.

This is what we mentioned on the 8th of January - Natural gas went down sharply as predicted and tested \$3.16 from \$3.83, and the volatile trend will continue in GAS so trade carefully. Oil will only be able to move higher if it closes above \$54.78 for three days which we don't see happening.

Energy stocks traded mixed. ERX is unable to move above \$43.00 and oil above \$54.78 which is not a good sign for the energy market.

We are not changing any of the predictions we mentioned on the 3rd of June: Same kind of positive, RB GAS and heating oil also moved higher. Natural gas traded mix. ERX have been hanging around \$29.00 level and it must close above \$33.00 level to give bullish signal in energy stocks which we don't see at this stage moment.

Oil has been failing to close above \$48.88 level but same time it is not closing below 48.88 level as well. If oil closes above \$48.88 for three days, then the next price level of \$52.55 may get achieved. At this stage some selling is recommended around \$48.88 level and on the down side the important level to buy is at \$44,55. Oil prices have gained almost 70% from \$27.71 which we called the perfect bottom for oil.

This is what we mentioned on the 2nd of February: Many are predicting oil remaining in the teen's, but we do not see oil going below \$27.71, so I hope those who are targeting \$21 are doing their research well. Higher side it will struggle to move above \$35.18 levels, and if it does than \$44.55 is next target with \$48.88 selling level.

Natural gas lost a lot of value from our recommended selling price of \$2.44. today it closed around \$2.03. One can start acquiring very small positions in natural gas around \$1.72 and below.

This is what we mentioned in our book "2016 Financial Predictions" in oil's section:

IMPORTANT NOTE: *As most of you are aware our view for energy has been very negative since June 2014. The overall trend in energy prices will remain negative*

so we do not recommend adopting long term positions. This means that do not take any trades earlier in the year and continue holding them for the rest of the year, because the higher side in oil will remain limited. There will be better opportunities to make money by trading in and out. Heating oil and RB gas will follow oils trend, so during this year we may see oil moving towards \$48.50 or \$52.95, and on the down side it may hold \$34.55. If it closes below \$35.55 for three days then there are chances that oil prices could fall towards \$29.65. Traders should take advantage of buying short term call options before any of the above-mentioned cycles start, and also book profit quickly before the positive cycles end.

Energy stocks will trade mixed without any major movement, so longer term investors should not be putting any money in energy stocks. Any sharp rise should be taken as a profit booking opportunity if you are holding any energy stocks.

Natural Gas' trend will remain positive during 2016, so one can stay long in Natural Gas in the year 2016. However, it is very important to remember to keep booking profit before any of the above mentioned negative cycles start. Overall, Natural Gas will outperform oil in the year 2016.

For short term strategies and price targets please follow our weekly and daily newsletters.

Ninth Cycle:

*From the **26th of November to 31st of December 2016** - During this cycle, we see positive momentum coming back in the energy markets; oil prices will form a bottom, and oil stocks will also act positively. Even though this is a positive cycle, the higher side will remain limited. Natural gas and RB gas will move sharply higher during this period.*

Energy trading ranges for 2016:

Crude Oil: \$52.95 to \$29.78 (As predicted last year, oil may hold the \$30.00 level, and if it trades below that for five days, then there's a possibility that it could test 2002's low of the \$27.78 level)

Natural Gas: \$2.88 to \$1.82 (higher side \$3.57 if it cross \$2.88)

Look at accuracy levels about oil that we predicted in the book.

This is what we stated Monday, the 31st of Oct 2016: *Friday oil, heating oil and RB Gas traded negative as predicted. Energy stocks also went down but gas traded mixed. On Monday, oil will trade negative; stay sidelined or those who are holding shorts can continue holding and cover some around \$47.50. If oil starts trading below this, then expect \$46.75 to \$44.88 level, cover all shorts at \$44.55 level. Heating oil and RB Gas will trade negative or will follow oil. On the higher side, oil will struggle to remain above \$49.88 level which is the most important astro resistance level.*

Natural gas will trade on both sides without any clear directions so avoid trading but on the lower side one can buy GAS for Tuesday. Don't touch energy stocks as they will keep struggling.

This is what we mentioned on Friday, the 2nd of Sept 2016: *On Thursday oil, heating oil and RB Gas prices went down sharply lower and weakness will continue Friday. One can cover 50 to 70% shorts around \$42.61 level in oil and 100% around \$41.78, so one can cover positions in heating oil and RB Gas on Friday.*

This is what we mentioned Monday, the 21st of December 2015: *Last week energy traders remained very nervous as they felt like abandoned by the bigger financial institutions and other large energy investors, but the truth is that every energy trader or investor is badly stuck energy trades.*

In 2008 we predicted a crash in oil from \$145 and in 2009 we predicted that it had bottomed out at \$33.00 level. That prediction provided great returns those who invested in oil and energy stocks. Now once again after the prediction of oil falling in 2014, since the last two weeks we have been predicting that oil would form a bottom around \$34.55 level so watch this prediction closely. I am

not saying that oil won't fall below \$34.55 level but surely those who will buy around this level may be rewarded handsomely.

Maximum fearful days: According to the current astro cycle we see another 12 volatile or fearful trading days are pending but the down side is limited.

*This is what we mentioned on the 27th of August 2015: **If oil trades below \$47.00 for two days then there are chances it could retest our magic support figure of \$44.55. If it starts trading below \$44.55 then next level \$38.50 so avoid buying positions.***

We are not recommending any buying in heating oil and RB gas, also one should avoid buying any energy stocks.

*This is what we mentioned on the 27th of April 2015: **Adopt trading in and out strategy in energy, but don't take any shorts in oil, heating oil or RB Gas. Sell some energy stocks.** Energy stocks will trade mixed without any major move so one can get ready to sell energy stocks. Higher side it is possibility that oil may see \$63.80 level, if its hold \$57.00 level. Keep adding positions in Natural gas around \$2.55.*

*This is what we mentioned on the 5th of March 2015: **Oil shouldn't break \$47.00 level this time, if it does then surely scary time is coming ahead for energy investors. On Down side oil will hold \$47 and on the higher it will have a difficult time crossing above \$55.78 so watch these levels closely.***

Watch our higher side target \$55.78 to short and \$44.55 to aggressive buy. Stay away from energy stocks. Small support for oil is \$47.00. ERX won't be able to move above \$70.00 level, so selling is recommended in energy stocks when ERX reaches to \$70.00.

*This is what we mentioned on the 3rd of January 2015: **On our predicted lower side target of \$44.55 is coming closer so one can cover 100% short positions and may be buy very small trade but I won't be buying as I would like dust to settle. RB Gas, heating oil and natural gas lost value as well on Monday. Don't buy RB Gas and heating oil but surely natural gas can be bought around \$2.71.***

*This is what we mentioned on the 23rd of December 2014: **Oil can only get lower if it close below \$54.40 for three days, if it does then it will hit \$45.20 but chances of happening this is very less.***

This is what we mentioned on the 11th of December 2014: *Wednesday our fear proven very true, we strongly recommend to stay away from oil. When oil broke \$92.88 we recommended sell oil and get out from all energy product, when it broke \$88.88 we predicted it is reaching toward \$64.20. Two weeks back we mentioned that if oil falls below \$64.20 then chances are that it may move toward \$57.80 level. Most important level will be \$54.40.*

This is what we mentioned on the 5th of December 2014: *Oil and other energy products lost more value on Friday as predicted. We are not recommending any buying in energy stocks, oil, RB gas and heating oil. Natural gas gained value from the lower levels on Friday as predicted.*

On Monday the higher side will remain limited, and if oil closes below or trades below \$64.00 for more than seven hours then expect \$57.90 levels in the short term. Selling is recommended in energy and energy stocks on Monday. It looks like oil is getting ready to break \$60.00 so stay short or add selling on any fall.

Currencies:

This is what we stated on the 4th of January, 2017: *We don't see dollar index going above 103.78 level so watch closely and closing below 102.55 will push dollar toward 101.55 level. Most of currencies gained nice value on Wednesday, emerging market currencies had best day.*

On Thursday, most of currencies will trade both sides, buying is recommended on lower sides in most of currencies so don't miss opportunity.

Buy Pound, Yen, Australian dollar and Canadian dollar. Also buy Franc and Euro without fear.

Astro cycle changed late today on 3rd January so safe buying in all major currencies against USD.

Dollar closing below 102.75 will confirm that it would test the 101.55 level this week.

We are not changing any predictions in currencies of what we mentioned on Monday, the 31st of October 2016: *Once again tested 99.00 level but then sharply came down from the middle of the trading sessions. We are still recommending to keep building positions in USD around 99.00 level. On Monday, we still recommend buying Euro and other currencies around the lower side, or selling USD around the higher side level. On the down side USD may hold 96.71 level so watch this level closely. Euro can move up to 1.1111 level in this week, so book profit if it goes there.*

On late Monday, the Scorpio Moon will bring both sides volatility. On Wednesday, the FED will announce decisions and due to the Scorpio Moon traders will get confused. Trade light or just trade in and out in currencies but medium term traders can hold selling positions in USD.

Stay short in Yen but one can cover Japanese Yen as it may move towards 0.9525 to 0.9250 level at this stage.

This is what we mentioned on Monday, the 29th of August 2016: *We see Euro holding 1.1055 level and Pound 1.2925 level. We don't see it falling below 0.9410 level and on the higher side it will have a difficult time to move above 1.0198 level. For USD index 97.00 to 97.50 level will play the role of a Wall for dollar which dollar may not be able to breach at this stage, or maybe even for the next six weeks, and on the down side USD may test 92.50 level.*

This is what we mentioned last Monday, the 25th of July 2016: This is what we mentioned on Wednesday, the 13th of July: *Any rise shall be taken as selling opportunity in Yen, in the next two months we can 900 pips in Yen or it will easily come down to 0.9200 level very soon. We don't see Yen moving above 0.9878 level and in the worst case scenario 1.0000 will be maximum side.*

*Friday USD tested 97.50 level and this is an important level. Dollar may keep testing this level during this week. **We don't see Euro going below 1.0923 and Pound 1.2988 level.** Pound should be in you aggressive buying list until it holds this level.*

On Monday, the 11th of April 2016 we stated: *Last week USD traded negative, and lost value against most of currencies. There are still chances that USD may*

test 92.50 level so watch USD trend closely, and start taking positions at 92.50 level.

Emerging market currencies have done very well and it's time to close positions if you are short or medium term traders. Rupee won't fall much so don't short Rupee but surely Rand, Real, Peso and Rubble will lose some value from middle of Monday.

Australian won't hold above \$0.7725, Canadian dollar 0.7900, Euro 1.1475, Franc 1.0555, and Yen 0.9288 level.

This is what we mentioned last Thursday: *Pound is ready for 1.4123 mark. Sell Pound and add more Swiss Franc sell.*

We are not recommending any new short in Euro, surely one can acquire some positions in Euro for the short period of time.

Emerging market currencies are getting ready to for bottoms expect few won't be trust like Rand and Rubble. Wednesday we see many currencies gaining some value but stay away from Pound, Canadian and Franc as they can keep making new lows so hold positions with 3% more corrections.

This is what we mentioned on the 22nd of December: *Euro will struggle to move above 1.1075 and may hold value 1.0725 so watch these both levels closely.*

This is what we mentioned on the 23rd of April 2015: *The Medium and longer term trend is still very positive for USD but for the short term a mix to bit weaker trend indicated. USD Index have achieved our target of 100 and now down side 95.00 or at worst case 90.00 level will be great buying.*

Dollar is our longer-term buying trade so we won't recommend shorting dollar, we recommend buying USD on any weakness. Euro higher side 300 pips and lower side more than 3000 pips. We don't see USD index going below 95.00 levels.

Remember this what we mentioned on the 5th of March 2015: *Currency war has nothing to do with USD Friday USD gained value as predicted. Medium- and longer-term outlook is very positive. As stated dollar will have some difficulty crossing above 95.50 level for the short term but if dollar will break 95.50 then it may move towards 102.70 later this year. On the other hand euro will move*

towards 1.0730 to 1.0388. At this stage one should start covering all shorts in currency.

Sell Euro around 1.1730 to 1.1788 and Franc 1.0988.

This is what we mentioned on Monday, the 15th of Jan 2015: *Most fund managers and market advisors are still analyzing the after effects of a rocking Swiss Franc on Swiss National Bank. I just finished one interview from Switzerland and they are too excited about Swiss Franc's move. Our view was very simple, we recommended that it will not be able to hold above 1.2270 level so if Franc moves to 1.2270 then it will be time to sell as it will going to go back to par levels.*

This is we mentioned on the 2nd of October: *On Thursday USD will trade mixed so we strongly recommend booking 100% profit in all short positions in euro, Pound, Franc, Yen and Australian dollar. Euro has moved down more than 1000 pips, Franc moved 750 pips, and Yen 4000 Pips. We will wait for few days before we put out a new strategy so wait for our weekly newsletter.*

Remember, this is what we mentioned in the month of July: *At this stage USD is trading in a positive direction without any break since the last three weeks. Finally, it is reaching a most crucial level because once it breaks 81.78 then the nonstop upside journey will start in USD. Also euro falling below 1.3355 level will bring huge corrections. I am waiting for USD to close above 81.78 because then USD will move like wild fire toward 87.88.*

This is what we mentioned in the month of May (2014): Keep adding USD on any weaknesses on Tuesday or around 79.50. Sell Euro around 1.3988, and Swiss Franc around 1.1470. Emerging market currencies will trade a bit weaker or sideways from Tuesday. We strongly recommend taking some buying positions in USD around 79.50.

In this year's book "2015 financial predictions" we predicted the "final bear cycle in the market from the 27th of July to the 15th of August 2015". Yes, the Sun can bring some uncertainty, but take this uncertainty as a buying opportunity at the same time in 2015 in the month of August.

Watch the 2088 level for S&P, as it is most tough astro resistance of 2015. In April when markets were falling, we predicted S&P won't go below 1825, and by the 15th of June, S&P would achieve 1932 to 1955 and 1988.

In our 2015 book we mentioned that commodities will have worst year of 2015, and so far precious metals, base metals, grains and softs have been struggling and they will keep moving down in the second half. Dollar will perform amazingly well in 2015 so hold positions and money in USD.

Reading daily range: When we predict a **weaker trend** it means prices can break lower side and they can trade below predicted lows. (You can cover short but don't buy extra at lower levels until our indicators give buy signal).

When we predict a **positive trend**, means daily price can break upside and they can trade higher than predicted price (you can book profit but don't short that market).
